THE WEALTH SHIFT

How to Reposition Your Money from Wall Street to Main Street

By J. Marque

If you've read the Money Decoded trilogy, you already know the rules changed. Your dollar is losing value. The system rewards asset owners and punishes savers. The 401(k) was never designed for you. Now the question isn't whether you understand the problem. It's whether you're going to do something about it.

This guide is for the person who's ready to do something about it.

- About the Author

INTRODUCTION: THE WEALTH SHIFT IS ALREADY HAPPENING

There are two types of people reading this right now.

The first type has $200K, $400K, maybe $700K sitting in retirement accounts and brokerage portfolios. They check their statements quarterly. They see the balance going up. Sometimes. They see it cratering every few years. They pay fees they don't fully understand to managers they've never met. And somewhere in the back of their mind, a quiet voice keeps asking: *Is this really the best I can do with this money?*

The second type already knows the answer is no. They've done the reading. They understand that the stock market is a wealth extraction system disguised as a wealth creation tool. They've seen what real estate does over 20- and 30-year windows. They know colleagues or neighbors who own rental properties generating $3,000, $5,000, $8,000 a month in cash flow from assets

5

that appreciate while they sleep. And they keep thinking: *That should be me. But I don't know where to start.*

If you're either of those people, this guide was written for you.

What I won't do in this book: talk down to you. You're not a financial illiterate. You're not someone who needs to be convinced that investing matters. You already invest. You already save. You already understand compound interest and tax brackets and the difference between a Roth and a Traditional IRA.

What you don't know is real estate. Specifically, you don't know how to take the money that's currently sitting in Wall Street's ecosystem, earning mediocre returns, hemorrhaging fees, exposed to volatility you can't control, and reposition it into tangible assets on Main Street that generate predictable, tax-advantaged cash flow every single month.

That's what this guide teaches. Module by module. Number by number. Step by step.

Who This Guide Is For

You earn $80,000 to $300,000 or more per year. You have $100K to $1M+ in retirement accounts, brokerage accounts, or savings. You're disciplined. You've been contributing to your 401(k), maxing out your IRA, maybe buying index funds on the side. You've done everything "right" by conventional standards.

And yet you have a nagging feeling that the conventional playbook is broken.

It is. And you already know why if you've read the Money Decoded trilogy. The dollar has lost 87% of its purchasing power since 1971. The 401(k) was a tax loophole for executives that corporations co-opted to eliminate pensions. Your mutual fund fees are compounding against you every single year. And the Federal Reserve's money printing has made asset ownership the only reliable hedge against the inflation they create.

You know all of this. What you need now is a plan.

6

What You'll Walk Away With

By the end of this guide, you will understand:

1. Exactly how much your current portfolio is costing you in fees, taxes, and opportunity cost. Down to the dollar.
2. How to use a **Self-Directed IRA** to invest your retirement money directly into real estate, step by step
3. When and how to liquidate stock positions for real estate investment without getting destroyed by capital gains taxes
4. Which passive real estate strategies match your capital level, time commitment, and risk tolerance
5. **The precise math** for replacing your W-2 income with rental cash flow
6. Who to hire and how to vet them, from custodians to property managers
7. A 6-month execution plan for repositioning your first tranche of capital from Wall Street to Main Street

This isn't a $50,000 guru course. It's a $197 strategy guide written by someone who's moved $250 million through real estate transactions. Wholesaler, flipper, landlord, title company owner, consultant. I've seen this from every angle. I've overseen repositionings for people with $80K in a stale 401(k) and people with $2M in a brokerage account that was bleeding fees.

The strategy is the same. The numbers scale. The math doesn't lie.

Grab a coffee. Let's begin.

MODULE 1: THE WALL STREET TAX

The Fee You Don't See

You pay taxes. You know that. You pay them every paycheck, every April, every time you sell a stock. Taxes are visible. They have line items. You can calculate them.

7

But there's another tax on your wealth that doesn't have a line item. It doesn't show up on your pay stub. It doesn't appear on your 1040. Most people will never see it unless they look for it.

I call it the Wall Street Tax. It's the cumulative drag of management fees, expense ratios, advisory fees, transaction costs, and inflation erosion that silently extracts wealth from your portfolio every single year. And for most people with $100K to $500K in retirement accounts, it's costing them between $3,000 and $15,000 annually.

That's not a typo.

Let me show you the math.

The Hidden Fee Structure

The average American with a 401(k) is paying multiple layers of fees, most of which they've never identified:

Layer 1: Plan Administration Fees (0.25% - 0.75%) Your employer's 401(k) plan has administrative costs: recordkeeping, compliance, auditing, customer service. These fees are passed to participants. Most people never see them because they're deducted from the fund's returns before your statement is generated. On a $300,000 account, that's $750 to $2,250 per year.

Layer 2: Investment Management Fees / Expense Ratios (0.50% - 1.50%) Every mutual fund in your 401(k) charges an expense ratio. Actively managed funds charge between 0.50% and 1.50%. Some charge more. The industry average for equity mutual funds is approximately 0.66%, but many 401(k) plans are loaded with higher-cost options because the plan administrator gets revenue-sharing kickbacks from the fund companies. On a $300,000 account with a 1.0% average expense ratio, that's $3,000 per year.

Layer 3: Financial Advisor Fees (0.50% - 1.50%) If you have a financial advisor managing your investments outside your 401(k) (a brokerage account, an IRA), they typically charge 0.75% to 1.50% of assets under management (AUM). Some charge flat fees, but AUM-based fees are the industry standard. On a $300,000 portfolio, a 1.0% advisory fee is $3,000 per year.

Layer 4: Trading Costs and Bid-Ask Spreads (0.10% - 0.30%) Every time a mutual fund buys or sells securities inside the fund, there are transaction costs and bid-ask spreads. These

8

don't show up in the expense ratio. They're invisible. Studies have estimated these costs at 0.10% to 0.30% per year. On a $300,000 account: $300 to $900 per year.

Layer 5: Tax Drag (0.50% - 1.50%) In taxable accounts, capital gains distributions from mutual funds create annual tax liability, even if you didn't sell anything. You're paying taxes on gains you never realized. This is the "phantom income" problem of mutual fund ownership.

THE MATH: The Real Cost of Your 401(k)

Account Balance: $300,000

FEE LAYER	*RATE*	*ANNUAL COST*
Plan administration	*0.50%*	*$1,500*
Expense ratios	*1.00%*	*$3,000*
Advisor fees (if applicable)	*1.00%*	*$3,000*
Trading costs	*0.20%*	*$600*
Total Annual Fee Drag	***2.70%***	***$8,100***

That's $8,100 per year. Every year. For doing nothing except leaving your money where it is.
Over 20 years at 2.70% annual fee drag on a $300,000 portfolio (assuming 8% gross returns):

- *Without fees: $300,000 grows to $1,398,000*
- *With 2.70% fee drag: $300,000 grows to $838,000*
- *Fees cost you:* ***$560,000***

More than half a million dollars *-- extracted by the financial services industry from your retirement.*

9

The Compounding Problem

The reason fees are so devastating: they compound against you the same way returns compound for you.

A 2% annual fee doesn't just cost you 2% of your current balance. It costs you 2% of what your balance would have been, including all future growth on that money. Every dollar taken in fees is a dollar that never compounds for you again.

Let me make this concrete.

You have $500,000 in retirement accounts. You're earning 7% gross returns per year (which is roughly the long-term average for a balanced portfolio). You're 45 years old. You plan to retire at 65. That's 20 years.

Scenario A: You pay 0.10% in total fees (what you'd pay in a low-cost index fund with no advisor)

- Starting balance: $500,000
- Annual return after fees: 6.90%
- Balance at age 65: $1,881,000
- Total fees paid over 20 years: ~$49,000

Scenario B: You pay 2.50% in total fees (typical for an actively managed 401(k) with an advisor)

- Starting balance: $500,000
- Annual return after fees: 4.50%
- Balance at age 65: $1,204,000
- Total fees paid over 20 years: ~$677,000

The difference: **$677,000 in fees versus $49,000.** That's $628,000 more extracted from your retirement over 20 years.

10

Now compare both scenarios to what happens when you reposition that same $500,000 into real estate.

11

THE MATH: $500K in Wall Street vs. $500K in Real Estate
Scenario A: $500K in Managed Portfolio (2.5% total fees)

- *Gross return: 7%*
- *Net return after fees: 4.5%*
- *Value after 20 years: $1,204,000*
- *Annual cash flow: $0 (growth only, no distributions)*
- *Tax treatment: Ordinary income on withdrawal from 401(k)*

Scenario B: $500K deployed into 5 rental properties ($100K down each on $250K properties)

- *Total real estate controlled: $1,250,000 (using leverage)*
- *Average cash flow per property: $400/month net after all expenses*
- *Total monthly cash flow: $2,000/month = $24,000/year*
- *Annual cash-on-cash return: 4.8% (cash flow only)*
- *Property appreciation at 3% annually: $1,250,000 grows to $2,258,000*
- *Equity after 20 years (appreciation + mortgage paydown): ~$1,700,000+*
- *Annual cash flow in year 20 (with rent increases): ~$48,000+/year*
- *Tax treatment: Depreciation offsets income; 1031 exchange defers capital gains*
- *Total fees paid to Wall Street: $0*

Wall Street path: $1.2M in a retirement account you can't touch until 59 1/2, taxed as ordinary income when you withdraw, generating zero cash flow today.
Real estate path: $1.7M+ in equity, $48,000+/year in cash flow, tax advantages throughout, and you controlled $1.25M in assets with the same $500K.
The difference isn't marginal. It's generational.

12

Why Your Financial Advisor Won't Tell You This

Your financial advisor makes money based on your assets under management. The more money you keep in their ecosystem, the more they earn. Every dollar you move to real estate is a dollar that stops generating fees for them.

This isn't a conspiracy. It's just a business model. Theirs. And it creates a structural conflict of interest that no amount of "fiduciary duty" disclaimers can resolve.

Look at the direct comparison:

Your advisor's incentive: Keep $500K under management at 1% AUM = $5,000/year to the advisor, every year, regardless of performance.

Your incentive: Deploy $500K into cash-flowing assets that generate $24,000+/year in passive income and appreciate over time.

Those two incentives are in direct conflict. Your advisor profits when your money stays in the market. You profit when your money works harder somewhere else.

There are good financial advisors who will have this conversation with you honestly. But most won't, because the moment you move $200K out of their managed portfolio, their annual revenue drops by $2,000. Multiply that by 50 clients, and you see why the industry has a strong incentive to keep real estate out of the conversation.

The Mutual Fund Performance Problem

Let's address the assumption underlying your entire 401(k): that the professional fund managers picking your stocks are earning their fees.

They're not.

The SPIVA (S&P Indices Versus Active) Scorecard is published annually by S&P Dow Jones Indices. It's the most thorough study of active fund management versus passive index performance. The most recent findings:

13

- Over a 1-year period: approximately 60% of actively managed large-cap funds underperform the S&P 500 index
- Over a 5-year period: approximately 79% underperform
- Over a 10-year period: approximately 85% underperform
- Over a 15-year period: approximately 89% underperform
- Over a 20-year period: approximately 94% underperform

Read those numbers again. Over 20 years (a typical retirement savings horizon), 94% of the professional fund managers you're paying 1-2% annual fees to will fail to beat an index fund you could own for 0.03%.

This isn't a debatable point. This is data, published by the same index company that creates the S&P 500. The financial services industry's own measurement system proves that the vast majority of active management is value-destructive.

And yet the 401(k) industry continues to load plans with actively managed funds. Because active funds generate higher fees. Higher fees mean more revenue for plan administrators, fund companies, and advisors. The performance doesn't matter to them. Your participation does.

The Wealth Transfer You're Funding

In the Money Decoded trilogy, we covered the Cantillon Effect, the principle that those closest to the creation of new money benefit the most, while those farthest away get crushed. The same principle applies to Wall Street's fee structure.

When you pay 2-3% in annual fees, that money goes to:

- Fund managers who underperform the S&P 500 index 89% of the time over 15-year periods (SPIVA scorecard data)
- Financial advisors who, in many cases, are sales representatives with a Series 7 license, not wealth strategists
- Plan administrators who profit from the complexity they created
- Trading desks that earn spreads on every transaction inside your funds

You are on the wrong side of this transfer. Every year. Automatically. By design.

14

The Tax Inefficiency of Wall Street

Beyond fees, there's another drain on your portfolio that most investors overlook: tax inefficiency.

Mutual funds are required by law to distribute capital gains to shareholders each year. When a fund manager sells stocks within the fund at a profit, that profit is passed through to you as a taxable distribution, even if the fund's overall value went down that year. This creates the absurd situation where you can lose money on a fund and still owe taxes on it.

In 2022, for example, the average U.S. stock fund lost approximately 17% of its value. Yet many of those same funds distributed capital gains that investors had to pay taxes on. You lost money AND owed the IRS. That's the system working as designed. For the system, not for you.

Real estate, by contrast, offers some of the most favorable tax treatment in the entire tax code:

- **Depreciation:** The IRS allows you to deduct the cost of a residential rental property over 27.5 years, creating paper losses that offset your rental income (and potentially your W-2 income). You can receive $8,000/year in net cash flow from a rental property and owe zero income tax on it because depreciation creates enough deductions to shelter the income.
- **1031 Exchange:** When you sell a property, you can defer all capital gains taxes by reinvesting the proceeds into another property of equal or greater value. There is no equivalent in the stock market. When you sell stocks at a profit, you pay taxes. Period.
- **Cost Segregation:** An engineering study reclassifies components of your property (appliances, carpet, fixtures) into shorter depreciation schedules, accelerating your tax deductions into the early years of ownership. A cost segregation study on a $250,000 property can generate $50,000-$80,000 in first-year deductions.
- Mortgage Interest Deduction: Interest on investment property mortgages is deductible against rental income.
- Pass-Through Deduction (Section 199A): Rental real estate may qualify for a 20% deduction on qualified business income, further reducing your effective tax rate.

The net effect: a dollar earned in rental real estate is worth significantly more than a dollar earned in a mutual fund, because the tax code treats them completely differently. This isn't a

15

loophole -- it's intentional policy. The government wants private capital building housing. They incentivize it through the tax code. The only question is: are you taking advantage of the incentive, or ignoring it?

What $250M in RE Transactions Taught Me

I've been on both sides of this equation. Early in my career, I had retirement accounts structured the conventional way. Mutual funds. Target-date funds. An advisor who sent me quarterly statements and called once a year.

Then I started doing real estate deals. And the first time I ran the numbers on a rental property (actual numbers, not projections from a fund prospectus), I realized that a single $150,000 rental property generating $600 per month in net cash flow was outperforming my entire $200,000 retirement portfolio on a cash-on-cash basis. With better tax treatment. With an asset I could touch, insure, improve, and control.

Over $250 million in transactions later, I've watched this play out hundreds of times. The person with $300K in a 401(k) earning 6% gross (4% net after fees) is losing to the person with $300K deployed across three rental properties generating 8-12% cash-on-cash returns with appreciation, leverage, and tax benefits on top.

The difference isn't luck. It's not risk tolerance. It's not sophistication. It's knowing that the option exists -- and having a plan to execute it.

That plan is what this guide provides.

16

> ***ACTION STEP: Module 1***
>
> 1. *Pull your most recent 401(k) or IRA statement. Look for the "expense ratio" of each fund you're invested in. If you can't find it, call your plan administrator and ask for the total annual fee disclosure (they're required to provide it under ERISA regulations).*
> 2. *Calculate your total annual fee drag: (account balance) x (total fee percentage). Write this number down.*
> 3. *Multiply that number by 20. That's a rough estimate of what fees will cost you over the next two decades. Before compounding. The real number is worse.*
> 4. *Ask yourself one question: Would you write a check for that amount to your fund manager if you had to pay it all at once?*
>
> *In the audio module, I walk through three real fee audits with actual clients: one with $140K, one with $380K, and one with $720K in retirement accounts. The numbers will make you uncomfortable. That's the point.*

MODULE 2: THE SELF-DIRECTED IRA (SDIRA) PLAYBOOK

Your Retirement Money Doesn't Belong to Wall Street

One sentence changes everything for most people the first time they hear it:

You can use your IRA or 401(k) money to buy real estate.

Not REITs. Not real estate mutual funds. Not a stock that happens to be a real estate company. Actual, physical real estate. A rental property. A piece of land. A commercial building. A note. A rehab project.

Your retirement money. Your rules.

17

The vehicle that makes this possible is called a **Self-Directed IRA**, or SDIRA. And despite the fact that SDIRAs have been legal since the IRA was created in 1974, most Americans have never heard of them.

That's not an accident. The financial services industry generates approximately $100 billion per year in fees from retirement accounts. Every dollar that moves into a Self-Directed IRA is a dollar they can no longer charge management fees on. They have zero incentive to tell you this option exists.

So I will.

What Is a Self-Directed IRA?

A Self-Directed IRA is an IRA (Individual Retirement Account) that allows you to invest in a wider range of assets beyond the typical stocks, bonds, and mutual funds. With an SDIRA, you can invest in:

- Residential rental properties
- Commercial real estate
- Raw land
- Real estate notes (private lending)
- Tax liens and tax deeds
- Private equity
- Precious metals (gold, silver, platinum)
- Private businesses
- Cryptocurrency
- And more

The IRS has always allowed these investments. The tax code doesn't restrict what an IRA can invest in. It only lists what it *cannot* invest in (life insurance, collectibles, and S-Corp stock). Everything else is fair game.

The reason most people don't know this is that traditional IRA custodians (Fidelity, Schwab, Vanguard, TD Ameritrade) only offer their own products. They're not going to build a system

18

that lets you buy a rental property, because they can't charge you a 1% AUM fee on a house. The house doesn't live on their platform. It lives on Main Street. And that's exactly where your money should be.

Traditional IRA vs. Roth IRA vs. Self-Directed IRA

Let's clarify the terminology, because this is where most people get confused.

"Self-Directed" is not a *type* of IRA. It's a *feature* of how the IRA is administered. You can have a Self-Directed Traditional IRA, a Self-Directed Roth IRA, or a Self-Directed SEP IRA. The "self-directed" part means you choose the investments -- not a fund manager.

The comparison:

19

FEATURE	TRADITIONAL IRA	ROTH IRA	SELF-DIRECTED IRA (TRADITIONAL OR ROTH)
Tax Treatment	Contributions are tax-deductible; withdrawals taxed as ordinary income	Contributions are after-tax; withdrawals are tax-free	Same as underlying IRA type
Investment Options	Stocks, bonds, mutual funds, ETFs (custodian's menu)	Stocks, bonds, mutual funds, ETFs (custodian's menu)	Almost anything: real estate, notes, precious metals, private equity
Who Chooses Investments	You pick from the custodian's menu	You pick from the custodian's menu	You direct the custodian to invest in assets you identify
Custodian	Fidelity, Schwab, Vanguard, etc.	Fidelity, Schwab, Vanguard, etc.	Specialized SDIRA custodians (Equity Trust, Entrust, etc.)
Contribution Limits	$7,000/yr ($8,000 if 50+)	$7,000/yr ($8,000 if 50+)	Same limits as underlying IRA type
RMDs	Required at 73	No RMDs for original owner	Depends on IRA type
Control	Low, limited to custodian's platform	Low, limited to custodian's platform	High, you choose the asset and direct the custodian

The key insight: A **Self-Directed Roth IRA** is the most powerful wealth-building vehicle most Americans have never heard of. You invest post-tax dollars, the investment grows tax-free, and when you withdraw in retirement, you pay zero taxes. If your SDIRA rental property generates $800/month in cash flow and appreciates $100,000 over 15 years, all of that growth is tax-free in a Roth.

How to Roll Over Your 401(k) Into a Self-Directed IRA

This is the step-by-step process. It's simpler than most people expect, but the sequence matters.

20

Step 1: Determine Your Eligibility

You can roll over your 401(k) to an SDIRA if:

- You've left the employer that sponsors the 401(k), OR
- You're still employed but your plan allows "in-service rollovers" (many do; check your plan documents or call your HR department)
- You have a Traditional IRA, Roth IRA, 403(b), 457, or TSP (Thrift Savings Plan) that can be rolled over

If you're still employed and your plan doesn't allow in-service rollovers, you can still open an SDIRA and fund it with new contributions, personal savings, or rollovers from other accounts (old 401(k)s from previous employers, existing IRAs, etc.).

Step 2: Select Your SDIRA Custodian

Your custodian is the company that holds and administers your SDIRA. This is not a financial advisor. They don't tell you what to invest in. They hold the account, process transactions, handle IRS reporting, and ensure compliance. You direct -- they execute.

I cover custodian selection in detail below.

Step 3: Open Your SDIRA Account

This is paperwork. Your new custodian will have you fill out an account application, select the account type (Traditional or Roth), designate beneficiaries, and sign custodial agreements. Most custodians can complete this in 3-5 business days. Many offer online account opening.

Step 4: Initiate the Rollover

There are two types of rollovers:

Direct Rollover (Trustee-to-Trustee): Your 401(k) plan sends the money directly to your new SDIRA custodian. The funds never touch your personal bank account. No taxes. No penalties. No withholding. This is the method you want.

21

Indirect Rollover (60-Day): The 401(k) plan sends you a check. You have 60 days to deposit it into your SDIRA. Miss the deadline and the IRS treats it as a distribution. You owe income taxes plus a 10% early withdrawal penalty if you're under 59 1/2. The plan is also required to withhold 20% for federal taxes, meaning if you're rolling over $100,000, they send you a check for $80,000 and you need to come up with the other $20,000 from personal funds to deposit the full amount. Avoid this method unless absolutely necessary.

Always choose the direct rollover. Call your 401(k) plan administrator and say: "I want to do a direct rollover to a self-directed IRA. Here is the receiving custodian's information." They'll handle the rest. The process typically takes 2-4 weeks.

Step 5: Confirm Funds Have Arrived

Once the rollover is complete, verify the funds are in your SDIRA account. Your custodian should confirm receipt. The money is now in your self-directed account, ready to be deployed into real estate.

Step 6: Identify Your Investment

Now you find a property (or other investment). When you're ready to purchase, you direct your SDIRA custodian to use your IRA funds to make the investment. All contracts, deeds, and transactions are in the name of your IRA, not your personal name.

SDIRA Custodian Comparison

Not all custodians are created equal. Here are three of the most established:

Equity Trust Company

- Founded: 1974
- Assets under custody: $34+ billion
- Strengths: Largest SDIRA custodian, extensive educational resources, established track record
- Fees: Annual account fee (~$225-$295), transaction fees per investment, asset-based fees on some account types

22

- Best for: Investors who want a large, established custodian with deep real estate experience
- Website: trustetc.com

Entrust Group

- Founded: 1982
- Strengths: Strong customer service reputation, educational webinars, streamlined online platform
- Fees: Annual account fee (~$199-$399 depending on account value), transaction fees per investment
- Best for: Investors who value hands-on customer support and clear fee structures
- Website: theentrustgroup.com

Directed IRA (by Directed Trust Company)

- Founded: Led by Mat Sorensen, a nationally recognized SDIRA attorney
- Strengths: Legal expertise, modern platform, founded by someone who literally wrote the book on SDIRAs
- Fees: Annual account fee (~$295), flat transaction fees
- Best for: Investors who want a custodian with deep legal knowledge and a more modern interface
- Website: directedira.com

What to look for in a custodian:

- Fee transparency (no hidden fees)
- Processing speed (how quickly can they fund a deal?)
- Customer service quality (can you talk to a human when you need to?)
- Online platform functionality
- Experience with real estate transactions specifically
- No custodian should ever give you investment advice. If they do, that's a red flag.

23

Prohibited Transactions: What You Cannot Do

This is where people get tripped up. The IRS has strict rules about what you can and cannot do with SDIRA funds. Violate these rules and your entire IRA can be disqualified. The full balance becomes taxable immediately, plus penalties.

You CANNOT:

1. Buy property from yourself or sell property to yourself. Your IRA is a separate entity. You can't sell your personal rental property to your IRA, and you can't buy a property from your IRA for personal use.

2. Buy from or sell to "disqualified persons." Disqualified persons include: you, your spouse, your parents, your children, your grandparents, your grandchildren, your fiduciary advisor, and any entities controlled by these people. Siblings are NOT disqualified (a common misconception).

3. Live in or use the property personally. If your IRA buys a rental house, you cannot live in it. You cannot let your children live in it. You cannot vacation in it. It's an investment asset owned by your IRA.

4. Perform labor on the property yourself. You cannot be the one painting, mowing the lawn, or making repairs on an IRA-owned property. You're the account holder, not the maintenance crew. Hire professionals, paid from IRA funds.

5. Commingle funds. All expenses related to IRA-owned property (repairs, taxes, insurance, management fees) must be paid from IRA funds. All income (rent, sale proceeds) must flow back into the IRA. You cannot pay an IRA property expense from your personal checking account.

You CAN:

1. Direct your custodian to purchase property with IRA funds
2. Choose what property to buy and where
3. Hire property managers, contractors, and agents (paid from IRA funds)
4. Collect rent into your IRA account
5. Sell the property and reinvest proceeds within the IRA

24

6. Have multiple investments within one SDIRA

Tax Implications of the Rollover

Traditional 401(k) to Traditional SDIRA: No tax event. No penalty. The money moves from one tax-deferred account to another. You'll pay taxes when you withdraw in retirement, just like a regular 401(k).

Traditional 401(k) to Roth SDIRA (Roth Conversion): This is a taxable event. You'll owe income taxes on the amount converted. However, once the money is in the Roth SDIRA, all future growth -- rental income, appreciation, everything -- is tax-free. For someone with a long time horizon (10+ years before retirement), the Roth conversion can be extraordinarily powerful.

The Roth Conversion Strategy: If you have $300,000 in a Traditional 401(k), you don't have to convert it all at once. You can convert portions over multiple years to manage the tax impact. Convert $60,000 per year over 5 years, staying within your current tax bracket each year, rather than converting $300,000 in a single year and potentially pushing yourself into the 37% bracket.

A tax strategist (CPA) who understands both real estate and SDIRA rules is non-negotiable here. This is not a DIY decision.

25

THE MATH: David's SDIRA Repositioning

David's Situation:

- *Age: 52*
- *W-2 Income: $145,000/year (IT Director)*
- *Retirement accounts: $340,000 (old 401(k) from previous employer + Traditional IRA)*
- *401(k) allocation: Target-date fund averaging 6.2% gross return, 1.8% total fees*
- *Net return: 4.4%*
- *Annual fee drag on $340K: ~$6,120*

David's Move:

- *Rolled $80,000 from his old 401(k) into a Traditional SDIRA (direct rollover, no tax event)*
- *Kept $260,000 in his existing retirement accounts (diversification)*
- *Used the $80,000 SDIRA to purchase a $190,000 rental property*
- *SDIRA provided $38,000 down payment (20%) + $4,000 closing costs*
- *Non-recourse loan for $152,000 at 7.5% (SDIRA properties require non-recourse financing)*
- *Remaining $38,000 in SDIRA held as operating reserve*

David's Rental Performance:

- *Monthly rent: $1,650*
- *Mortgage (P&I): $1,063*
- *Property taxes: $165/month*
- *Insurance: $95/month*
- *Property management (10%): $165/month*
- *Maintenance reserve (5%): $83/month*
- *Vacancy reserve (5%): $83/month*
- ***Net monthly cash flow: $-4*** *(approximately breakeven in year 1)*

26

> *Wait. Breakeven? That doesn't sound exciting.*
> *But look at the full picture:*
>
> - *Mortgage paydown year 1: ~$3,600 (building equity with tenant's rent)*
> - *Appreciation at 3%: $5,700 in year 1*
> - *Rent increases at 3%/year: By year 3, net cash flow is $150+/month*
> - *By year 5: Net cash flow is $310+/month, property value is ~$220,000, mortgage balance is ~$140,000*
> - ***Total equity in year 5: ~$80,000** (from $42,000 invested after closing costs)*
> - ***Cash-on-cash return including equity build: 18%+***
>
> *Meanwhile, the $80,000 left in his target-date fund grew to ~$99,000 at 4.4% net.*
> *David's $80K SDIRA investment built $80K in equity in 5 years (90% return on capital). His $80K left in the 401(k) grew to $99K (24% return). The SDIRA investment outperformed by nearly 4x -- and it's generating monthly cash flow that grows every year.*
> *By year 10, David's property is worth approximately $255,000, his mortgage is down to ~$120,000, and his net cash flow is $730/month, all flowing back into his SDIRA tax-deferred (or tax-free if it's a Roth).*
> *The 401(k) is a number on a screen. The rental property is a machine that generates income every month while building equity that compounds.*

SDIRA Financing: Non-Recourse Loans

One important detail: when your SDIRA buys property with financing, the loan must be a **non-recourse loan**. The lender can only look to the property as collateral. They cannot pursue you personally if the loan defaults.

Non-recourse loans for SDIRAs:

- Typically require 30-40% down payment (higher than conventional)
- Interest rates are usually 1-2% higher than conventional mortgages

27

- Fewer lenders offer them, but they exist (First Western Federal, North American Savings Bank, Solera National Bank are among the lenders experienced with SDIRA loans)
- The loan is in the name of your IRA, not in your personal name

The higher down payment and interest rate are the tradeoff for the tax advantages. For many investors, the math still works overwhelmingly in favor of the SDIRA, especially in a Roth structure where all returns are tax-free.

UBIT: The Tax You Need to Know About

When your SDIRA uses financing (debt) to purchase property, a portion of the income is subject to **Unrelated Business Income Tax (UBIT)**. This is also called UDFI (Unrelated Debt-Financed Income).

The formula: If your SDIRA property is 60% financed (you put 40% down), then approximately 60% of the net income is subject to UBIT. The IRA gets a $1,000 standard deduction, and UBIT rates follow the trust tax bracket schedule.

This sounds complicated, but in practice:

- UBIT is only applicable when you use debt financing inside the IRA
- Depreciation offsets a significant portion of the taxable income
- Many SDIRA real estate investors pay little to no UBIT in the early years because depreciation creates paper losses
- Once the mortgage is paid off, UBIT goes to zero
- If you buy property with all cash (no financing), there's no UBIT at all

A CPA experienced with SDIRA taxation can model the UBIT impact for your specific situation. For most investors, the total returns still dramatically outperform a traditional 401(k), even after accounting for UBIT.

28

> ***ACTION STEP: Module 2***
>
> 1. *Determine if your current 401(k) allows in-service rollovers. Call HR or your plan administrator.*
> 2. *Identify any old 401(k)s from previous employers. These are the easiest to roll over.*
> 3. *Visit the websites of 2-3 SDIRA custodians and download their fee schedules. Compare annual fees, transaction fees, and processing times.*
> 4. *Calculate how much of your retirement portfolio you'd consider repositioning. A good starting point: 20-30% of your total retirement assets for your first SDIRA investment.*
>
> *In the audio module, I walk through a live SDIRA rollover timeline with a real student, from the first phone call to the custodian through the purchase of their first rental property. Total elapsed time: 47 days.*

MODULE 3: LIQUIDATION STRATEGY: STOCKS TO REAL ESTATE

When to Exit Wall Street (And When to Stay)

This is not a "sell everything and buy houses" book. That kind of reckless advice is what separates guru culture from actual wealth strategy.

This is a repositioning guide. The goal is to optimize your portfolio by moving capital from underperforming, fee-heavy, volatile positions into more stable, cash-flowing, tax-advantaged real estate assets. How much you move, how fast you move it, and where exactly it goes is a function of your specific numbers.

The framework:

29

The Decision Matrix

Before you liquidate a single share, answer these four questions:

Question 1: What is this position actually earning after fees, taxes, and inflation?

Most people know their gross return. They know their S&P 500 fund returned 12% last year. What they don't calculate is their net real return after management fees (1-2%), taxes on distributions (15-37% depending on your bracket), and real inflation (3-6%).

A 12% gross return with 1.5% fees, 20% capital gains tax on distributions, and 4% inflation becomes approximately a 5-6% real return. That's before you account for years when the market drops 20-40% and you spend years recovering.

Question 2: How much volatility am I absorbing for that return?

The S&P 500 has averaged approximately 10% annualized over the long term. But "average" is deceptive. In 2008, it dropped 37%. In 2020, it dropped 34% in 33 days. In 2022, it dropped 19%. If you're 55 and planning to retire in 10 years, a 37% drawdown on your $500,000 portfolio means you're suddenly working with $315,000 -- and it may take 3-5 years to recover.

A rental property generating $600/month in net cash flow doesn't drop 37% because the stock market panics. Rent keeps coming in. The mortgage keeps getting paid down. The property keeps appreciating at 3-5% per year regardless of what the Dow did today.

Question 3: Does this position generate current income, or is it growth-only?

Growth stocks and index funds don't send you a check every month. Your net worth on paper goes up, but you can't spend paper net worth. You have to sell to access the money, and selling triggers taxes.

Real estate generates current income. Cash flow. Monthly. Predictable. Spendable. And in many cases, that cash flow is tax-advantaged through depreciation deductions.

Question 4: What is the opportunity cost of leaving this capital in place?

Every dollar sitting in a mutual fund earning 6% net is a dollar that could be earning 10-15% in real estate when you factor in cash flow, appreciation, leverage, mortgage paydown, and tax ben-

30

efits. Opportunity cost is the return you're NOT getting by keeping money where it is.

Tax-Efficient Liquidation

This is where most people need strategy, not emotion. If you sell $200,000 in stocks all at once, you could trigger a massive capital gains tax bill. This is how to be smart about it.

Short-Term vs. Long-Term Capital Gains

- Positions held less than 1 year: taxed as ordinary income (up to 37%)
- Positions held more than 1 year: taxed at long-term capital gains rates (0%, 15%, or 20% depending on income)

Rule 1: Never liquidate a position you've held for less than 12 months unless you absolutely have to. The tax difference between short-term and long-term rates can be 15-22 percentage points.

Rule 2: Know your cost basis. If you bought $50,000 in stock that's now worth $200,000, you have $150,000 in capital gains. If you bought $50,000 in stock that's now worth $60,000, you have $10,000 in gains. Liquidate the positions with the smallest gains first to minimize tax impact.

Tax-Loss Harvesting

If you have positions that are at a loss, you can sell them to offset gains from other positions. This is called tax-loss harvesting.

Example:

- You sell Position A for a $40,000 gain
- You sell Position B for a $15,000 loss
- Net taxable gain: $25,000

If your total losses exceed your gains, you can deduct up to $3,000 in net losses per year against ordinary income, with the remainder carrying forward to future years.

31

Time your liquidations strategically: Sell losing positions in the same tax year as winning positions to offset the gains.

The Waterfall Strategy

This is the approach I recommend for most investors repositioning $100K-$500K+ from stocks to real estate. Instead of liquidating everything at once (triggering a massive tax event), you execute a systematic repositioning over 12-24 months.

Phase 1: Months 1-3, Identify and Triage

- Catalog every position by: current value, cost basis, unrealized gain/loss, annual fees, and time held
- Sort into three buckets:
  - **Liquidate now:** Positions with losses (harvest for tax offsets), positions with small gains, positions with high fees
  - **Liquidate in 6-12 months:** Positions approaching long-term holding status, positions with moderate gains
  - **Hold:** Positions with strong performance and low fees (yes, some stock positions are worth keeping)

Phase 2: Months 3-6, First Deployment

- Liquidate Bucket 1 positions
- Use harvested losses to offset gains
- Deploy proceeds into your first real estate investment (or SDIRA if using retirement funds)
- Target: 20-30% of total repositioning capital deployed in first 6 months

Phase 3: Months 6-12, Second Deployment

- Liquidate Bucket 2 positions as they reach long-term holding status
- Deploy into second and third real estate investments
- Target: 50-70% of total repositioning capital deployed by month 12

32

Phase 4: Months 12-24, Optimization

- Evaluate remaining stock positions against your real estate portfolio performance
- Liquidate remaining positions as tax-efficient windows open
- Deploy final tranche into real estate
- Target: 70-90% repositioned by month 24

Why 12-24 months instead of all at once?

1. Spreads the tax liability across multiple years
2. Allows you to use tax-loss harvesting strategically
3. Lets you enter real estate markets at different price points (dollar-cost averaging into real estate)
4. Gives you time to build your team and evaluate deals properly
5. Reduces the psychological stress of a massive portfolio change

How Much to Keep Liquid

Never deploy 100% of your investable capital into real estate. The framework:

Emergency Reserve: 6-12 months of personal living expenses in cash or high-yield savings. Non-negotiable. This money doesn't get invested in anything.

Operating Reserve per Property: $5,000-$10,000 per rental property for unexpected repairs, vacancy coverage, and capital expenditures. This sits in a dedicated account (or in your SDIRA if the property is IRA-owned).

Opportunity Reserve: 10-15% of your total investable capital held liquid for opportunities that require fast action. Real estate deals move quickly. Having capital available when a below-market deal surfaces is a competitive advantage.

Guideline for total allocation:

- Real estate: 50-70% of investable capital
- Stocks/bonds/index funds: 15-30%

33

- Cash/liquid reserves: 10-20%
- Alternative assets (gold, crypto, etc.): 5-10%

This is a framework, not a commandment. Your specific allocation depends on your age, income stability, risk tolerance, and goals. The point is: you don't go all-in on any single asset class. You reposition the majority of your wealth into the asset class that generates the best risk-adjusted, tax-advantaged returns. For most people, that's real estate.

Stock Market Volatility vs. Rental Income Stability

This comparison matters more than most people realize, because it affects not just returns but your quality of life.

Stock market:

- Returns fluctuate dramatically year to year (range: -37% to +33% in recent history)
- You cannot predict next year's return
- A 30% drawdown requires a 43% gain to recover
- Emotional stress during downturns leads to panic selling (the average investor underperforms the S&P 500 by 3-4% annually due to behavioral mistakes)
- Income (dividends) averages 1.3-2% for the S&P 500
- No control. You can't "improve" a stock to increase its value.

Rental real estate:

- Cash flow is predictable month to month (lease agreements)
- Property values are less volatile than stock prices
- You can improve the asset (renovate to increase value and rent)
- Multiple return streams: cash flow + appreciation + mortgage paydown + tax benefits
- Leverage amplifies returns (control $250K asset with $50K)
- Physical asset with intrinsic utility (people always need housing)

34

THE MATH: Volatility Impact on a $400K Portfolio
Stock Portfolio:

- *Year 1: +18% → $472,000*
- *Year 2: -22% → $368,160*
- *Year 3: +12% → $412,339*
- *Year 4: +8% → $445,326*
- *Year 5: -15% → $378,527*
- *5-year result: -5.4% total. Your $400K became $378K despite three positive years.*
- *Cash flow generated: ~$8,000/year in dividends ($40,000 total)*
- *Net position after 5 years: $378,527 + $40,000 dividends = $418,527*

Real Estate Portfolio (4 rental properties, $100K down each):

- *Total property value: $1,000,000 (leveraged)*
- *Annual cash flow: $1,200/property = $4,800/year ($24,000 over 5 years)*
- *Appreciation at 3%/year: Properties worth $1,159,000 after 5 years*
- *Mortgage paydown: ~$60,000 in equity built over 5 years*
- *Starting equity: $400,000*
- *Equity after 5 years: $400,000 + $159,000 appreciation + $60,000 paydown =* ***$619,000***
- *Cash flow received: $24,000*
- *Net position after 5 years: $619,000 equity + $24,000 cash =* ***$643,000***

The real estate portfolio outperformed by $224,000 -- and it generated predictable monthly income the entire time while the stock portfolio was gyrating between gains and losses.

35

Dollar-Cost Averaging INTO Real Estate

You're familiar with dollar-cost averaging in the stock market, investing a fixed amount at regular intervals to smooth out market volatility. The same principle applies to real estate, but with a critical difference: in real estate, dollar-cost averaging means buying properties at different price points across different market conditions, creating a portfolio that's resilient to any single market cycle.

In practice:

Property 1 (Month 6): You buy at the current market price. Maybe it's a high-interest-rate environment and sellers are motivated. You get a good deal because competition is low.

Property 2 (Month 14): Rates have dropped slightly. Prices have ticked up. You pay a bit more, but your first property has appreciated and your refinance options are improving.

Property 3 (Month 22): A different market entirely. Maybe you diversify into a second metro area. Different price point, different tenant demographic, different economic drivers.

By the end of your 24-month waterfall, you have three properties purchased at three different points in the market cycle, in potentially two different metros, with different tenant profiles. That's diversification that a single stock portfolio, no matter how many funds it holds, cannot replicate. All stocks are correlated to the same market sentiment. Your rental property in Birmingham isn't correlated to your rental property in Indianapolis the way Apple stock is correlated to Microsoft stock.

This is why the 12-24 month waterfall isn't just tax-efficient. It's investment-efficient. You're building a diversified real estate portfolio naturally, without trying to time any single market.

The Risk Conversation Nobody Has Honestly

Your financial advisor will tell you that real estate is "risky" and that a diversified stock portfolio is "safe." Let's examine both claims with actual data.

Stock market "safety":

- The S&P 500 has experienced drawdowns of 20% or more thirteen times since 1929

36

- The average bear market lasts 289 days and declines 36%
- In 2008-2009, the S&P 500 declined 57% from peak to trough
- $500,000 invested at the October 2007 peak was worth $215,000 by March 2009
- It took until March 2013 to fully recover. Over five years.
- You had zero control over the decline or the recovery

Rental real estate "risk":

- National median home prices have declined year-over-year only 6 times since 1968
- The worst decline was 2008-2012: approximately 27% nationally (half the stock market's decline)
- Even in 2008-2012, rents declined only 3-4% nationally. Tenants still paid rent.
- A landlord with a 30-year fixed mortgage, a tenant paying rent, and a property manager handling operations experienced the 2008 crisis as a minor reduction in cash flow -- not a 57% portfolio wipeout.
- By 2016, national home prices had fully recovered. Many markets recovered earlier.
- You have control: you can renovate to increase value, raise rents to market, refinance to improve cash flow, or hold through any downturn because rent continues to come in

The "risk" narrative around real estate is perpetuated by the financial services industry because every dollar you invest in real estate is a dollar that leaves their fee-generating ecosystem. The actual data tells a different story: real estate is less volatile, generates current income, offers tax advantages, and provides multiple levers of control that stocks simply cannot match.

That doesn't mean real estate is risk-free. Bad deals exist. Bad property managers exist. Bad markets exist. But those risks are manageable and controllable. Stock market risk is not -- you are 100% at the mercy of market sentiment, Federal Reserve policy, and global events you cannot influence.

The Psychological Barrier

I need to address this directly, because it's the real reason most high-net-worth professionals don't make the shift -- even when the math is staring them in the face.

37

Selling stocks feels like losing. Your brain has anchored to the number on the screen. If your portfolio shows $400,000, selling $200,000 and buying rental properties means your brokerage account now shows $200,000. That feels like you lost money, even though you deployed it into a higher-performing asset.

This is called **loss aversion bias**, and it's one of the most well-documented phenomena in behavioral finance. People feel losses approximately twice as strongly as equivalent gains. The pain of seeing your portfolio "drop" from $400K to $200K triggers the same stress response as actually losing money -- even though the $200K is now working harder somewhere else.

How to overcome it:

1. **Track your total net worth, not individual account balances.** When you move $200K from stocks to real estate, your net worth doesn't change. It's the same $200K. It moved from one line item to another. Create a simple net worth tracking sheet that includes all assets (stocks, real estate, cash, retirement accounts) on one page. Watch the total, not the parts.

2. **Focus on income, not value.** Your stock portfolio generates maybe $6,000-$8,000 per year in dividends on $400K. Your real estate portfolio generates $14,400-$24,000 per year in cash flow on the same capital. You didn't lose money. You increased your annual income by 2-3x.

3. **Remember that stocks are not "safe."** The narrative that stocks are the default "safe" investment is marketing, created by the financial services industry that profits from your participation. Stocks are volatile, fee-laden, tax-inefficient, and generate minimal current income. The only reason they feel "safe" is because you're used to them.

4. **Start small.** You don't have to reposition everything at once. Move 20-25% first. Buy one property. Experience the first rent check. Watch the first year of performance. Then decide whether to move more. The waterfall strategy isn't just tax-efficient -- it's psychologically manageable.

38

> ***ACTION STEP: Module 3***
>
> 1. *List every stock and mutual fund position you own. Include: current value, cost basis, unrealized gain/loss, annual fees, and holding period.*
> 2. *Sort them into the three buckets: Liquidate Now, Liquidate in 6-12 Months, Hold.*
> 3. *Calculate your total unrealized gains. Estimate the capital gains tax you'd owe at current rates if you liquidated the "Liquidate Now" bucket.*
> 4. *Identify any positions at a loss that can be harvested to offset gains.*
> 5. *Determine your target allocation: What percentage of your total investable capital do you want in real estate within 24 months?*
>
> *In the audio module, I break down the waterfall strategy with two case studies: a $180K repositioning completed in 14 months and a $520K repositioning completed in 22 months. Both achieved their target allocation with minimal tax impact.*

MODULE 4: PASSIVE REAL ESTATE STRATEGIES

You Don't Need to Be a Landlord

The number one objection I hear from high-income professionals:

"I don't want to deal with tenants, toilets, and 2 AM phone calls."

Neither do I. And I've closed $250 million in real estate. Not once have I unclogged a toilet.

The myth that real estate investing requires you to be a hands-on landlord is the biggest misconception keeping high-net-worth individuals out of the best-performing asset class of the last century. It's not true. It was never true. The wealthiest real estate investors in the world have never touched a toilet or answered a midnight maintenance call.

39

Here are the strategies that work for busy professionals who want their money working in real estate without it becoming a second job.

Strategy 1: Turnkey Rental Properties

What it is: You purchase a fully renovated, tenant-occupied rental property from a turnkey provider. The property comes with a tenant already paying rent and a property manager already in place. You close, and cash flow starts immediately.

How it works:

1. You select a turnkey provider in an investor-friendly market (more on market selection in Module 7)
2. They present available properties with financial projections (rent, expenses, estimated cash flow)
3. You evaluate the deal using the frameworks in this guide
4. You purchase the property (using personal funds, SDIRA funds, or a combination)
5. The existing property manager handles everything: tenant screening, rent collection, maintenance, repairs, evictions if needed
6. You receive a direct deposit every month. Your involvement: reviewing monthly statements.

Time commitment: 2-3 hours per month per property (reviewing financial reports)

Typical returns:

- Cash-on-cash: 6-10% in year one (improving annually with rent increases)
- Total return (including appreciation + mortgage paydown + tax benefits): 15-25%

Pros:

- Truly passive. Manager handles everything.
- Immediate cash flow from day one
- Predictable monthly income
- You can buy properties in the best markets regardless of where you live
- Scalable. Buy 5, 10, 20 properties using the same model.

40

Cons:

- Slightly lower returns than buying undervalued properties and renovating yourself
- You're dependent on the turnkey provider's renovation quality
- Management fees reduce cash flow (typically 8-10% of gross rent)
- Must vet the turnkey provider carefully (I cover this below)

Best for: Investors with $50K-$200K+ to deploy who want zero involvement in day-to-day operations. W-2 professionals who value their time at $100+/hour and don't want to learn active investing.

Strategy 2: BRRRR with a Property Manager

What it is: Buy, Rehab, Rent, Refinance, Repeat -- but with every step managed by professionals. You provide the capital and the decisions. Your team handles execution.

How it works:

1. Your investor-friendly agent identifies a below-market property
2. Your contractor handles the renovation (managed by your property manager or project manager)
3. Your property manager places a tenant at market rent
4. You refinance, pulling your initial capital back out (or most of it)
5. You redeploy that capital into the next property
6. Repeat

Time commitment: 5-10 hours per project during acquisition and rehab, 2-3 hours per month ongoing

Typical returns:

- Cash-on-cash: 10-20%+ (higher than turnkey because you're buying below market and adding value)
- Total return: 20-35%+ (the forced appreciation from renovation is the accelerator)

41

- The key metric: If executed well, you can recycle the same capital through multiple properties, essentially creating "infinite returns" on money that's no longer in the deal

Pros:

- Higher returns than turnkey
- Forced appreciation through renovation (you control the value increase)
- Capital recycling: pull your money out and do it again
- Tax advantages of depreciation on the improved property

Cons:

- Requires a strong local team (agent, contractor, property manager)
- Renovation introduces timeline and budget risk
- More involvement during the acquisition/rehab phase
- Not available through SDIRA without careful structuring (IRA can't pay you for labor, and rehab coordination can blur lines)

Best for: Investors with $75K-$300K+ who are willing to invest slightly more time upfront for significantly higher returns. People who are analytical and enjoy evaluating deals even if they're not executing the physical work.

Strategy 3: Real Estate Syndications

What it is: You invest as a limited partner (LP) in a real estate deal managed by an experienced operator (the general partner or GP). Think of it as a private real estate fund focused on a specific project or group of properties, typically large multifamily (apartment complexes), commercial, or development deals.

How it works:

1. You identify a syndicator (operator) with a track record
2. They present a deal: a 200-unit apartment complex, a commercial development, etc.
3. You invest as an LP, typically $50,000-$100,000 minimum
4. The syndicator manages everything: acquisition, renovation, operations, disposition

42

5. You receive quarterly or monthly distributions from cash flow
6. When the property is sold or refinanced (typically 3-7 years), you receive your share of profits

Time commitment: Virtually zero after the initial due diligence and investment. You're a passive investor.

Typical returns:

- Preferred return (cash flow): 6-8% per year
- Total return (including appreciation on sale): 14-20%+ over the hold period
- IRR (internal rate of return): 15-22% for well-executed deals

Pros:

- Completely passive. You write a check and wait.
- Access to institutional-quality assets (apartment complexes, commercial buildings) you couldn't buy alone
- Diversification across larger properties
- Professional management by experienced operators
- Tax benefits: depreciation, cost segregation, and K-1 pass-through deductions can offset W-2 income

Cons:

- Illiquid. Your capital is locked up for 3-7 years.
- Returns depend entirely on the operator's competence
- Minimum investments are typically $50K-$100K
- Must qualify as an accredited investor for most offerings (income over $200K individual / $300K joint, OR net worth over $1M excluding primary residence)
- Due diligence on the operator is critical. Bad operators can lose your money.

Best for: Accredited investors with $100K+ who want true passivity and are comfortable with a longer hold period. Professionals who want exposure to large-scale real estate without managing anything.

43

How to evaluate a syndication operator:

This is critical. A syndication is only as good as the operator running it. The due diligence framework:

1. Track record. How many deals have they completed? What were the actual returns versus projected returns? Ask for a full deal history with realized results, not just current projections. Any operator worth investing with will have multiple completed deals with documented results they're proud to share.

2. Alignment of interest. How much of their own money is in the deal? Operators who co-invest significant personal capital alongside their investors are aligned with you. Operators who take fees but invest nothing of their own have a different risk profile than you do.

3. Fee structure. Common syndication fees include acquisition fees (1-2% of purchase price), asset management fees (1-2% annually), and a promote/carried interest (20-30% of profits above a preferred return). These fees are standard, but they should be clearly disclosed and reasonable. If total fees would consume more than 30-35% of projected profits, the deal is too expensive.

4. Communication. How often do they report to investors? Monthly or quarterly financial reports should be standard. Operators who go silent for 6-12 months between updates are a red flag. You deserve transparency.

5. Legal structure. Every syndication should have a Private Placement Memorandum (PPM), an Operating Agreement, and a Subscription Agreement. If any of these documents are missing, walk away. Have your attorney review the PPM before you invest.

6. Exit strategy. What's the planned hold period? What's the exit strategy (sale, refinance, both)? What happens if the market shifts and the original plan doesn't work? Good operators have contingency plans and clearly defined decision-making authority.

Strategy 4: REITs vs. Direct Ownership

REITs (Real Estate Investment Trusts) are publicly traded companies that own and operate real estate. You can buy shares of a REIT through your brokerage account, just like buying stock.

When REITs make sense:

44

- You have less than $50K to deploy (below the threshold for direct ownership in most markets)
- You want instant liquidity (you can sell REIT shares any day the market is open)
- You want exposure to real estate sectors you can't access directly (data centers, hospitals, cell towers)
- You want to dollar-cost average into real estate with small monthly contributions

When direct ownership is better (which is most of the time):

- You have $50K+ to deploy
- You want the tax advantages of direct ownership (depreciation, 1031 exchange, mortgage interest deduction)
- You want control over the asset (a REIT manager makes all decisions; you make decisions on property you own)
- You want leverage (you can buy a $250K property with $50K; you can't buy $250K of REITs with $50K)
- You want predictable cash flow (REIT dividends fluctuate with market conditions and management decisions)

The comparison in numbers:

45

METRIC	REIT	DIRECT OWNERSHIP
Average annual return	8-12% (total, including price appreciation)	15-25% (total, including leverage, cash flow, appreciation, tax benefits)
Leverage	None (you invest $1, you own $1)	4:1 to 5:1 ($50K down controls $200K-$250K)
Tax treatment	Dividends taxed as ordinary income	Depreciation shelters income; 1031 defers capital gains
Control	Zero	Full
Liquidity	High (sell anytime)	Low (30-90 days to sell a property)
Volatility	High (REIT prices correlate with stock market)	Low (property values are stable relative to stocks)
Cash flow	Variable (dividends can be cut)	Contractual (lease agreements)

For the Wealth Shift investor, REITs are a parking place for capital you haven't deployed yet, not a destination. Once you have the capital and the team to purchase direct real estate, the returns, tax advantages, and control of direct ownership are superior.

The Cash-on-Cash Return Framework

This is the most important metric for passive investors. Forget what your financial advisor tells you about "total return." The number that matters for someone replacing W-2 income is **cash-on-cash return.**

Cash-on-Cash Return = Annual Net Cash Flow / Total Cash Invested

Example:

- You invest $60,000 total (down payment + closing costs)
- Your property generates $500/month net cash flow ($6,000/year)
- Cash-on-cash return: $6,000 / $60,000 = **10%**

Compare that to your mutual fund:

46

- You invest $60,000
- It returns 7% gross, 4.5% net after fees
- Annual return: $2,700
- You can't touch it until retirement without penalties

The rental property returns 10% in spendable cash flow TODAY. The mutual fund returns 4.5% in unrealized gains you can't access for decades. And the rental property is building equity, appreciating, and generating tax deductions on top of the cash flow.

How to Evaluate a Turnkey Provider

Not all turnkey providers are created equal. Some sell genuinely excellent, well-renovated properties with strong property management. Others sell lipstick-on-a-pig renovations in declining neighborhoods with terrible managers. This is how to tell the difference.

Green Flags:

- Transparent financials on every property (rent, all expenses, projected cash flow)
- They use conservative underwriting (if they project 10% cash-on-cash, the reality is usually 8-12%)
- They have an in-house or affiliated property manager with a track record
- They provide renovation details, before/after photos, and scope of work
- They have a history of repeat buyers (investors who bought 3, 5, 10+ properties through them)
- They're willing to share references from current investors
- They operate in markets with strong fundamentals (population growth, job growth, landlord-friendly laws)

Red Flags:

- Projections that seem too good to be true (15%+ cash-on-cash on turnkey is unlikely in most markets)
- They push you to buy quickly or suggest properties are "selling fast"
- Renovation quality is surface-level (new paint and carpet but no mechanical updates)

47

- They're vague about property management or don't have a dedicated manager
- They operate in declining markets where they can buy cheap but rents and property values are stagnant or falling
- No verifiable track record or reviews from real investors
- They make it hard to verify the numbers independently

Questions to ask every turnkey provider:

1. How long have you been operating in this market?
2. How many properties have you sold to investors?
3. What percentage of your investors have purchased more than one property through you?
4. Who manages the properties, and what is their track record (vacancy rate, average days on market, eviction rate)?
5. Can I speak with 3-5 current investors who own properties managed by your team?
6. What does your renovation scope typically include? Do you update mechanical systems (HVAC, plumbing, electrical), or primarily cosmetic?
7. What happens if the property doesn't perform as projected?

How to Evaluate a Property Manager

For passive investors, the property manager is the most important hire you'll make. A great property manager makes real estate investing truly passive. A bad one turns it into a nightmare.

What a property manager does:

- Markets vacant units and screens tenants
- Collects rent and handles late payments
- Coordinates maintenance and repairs
- Manages tenant relationships and complaints
- Handles evictions when necessary
- Provides monthly financial reports
- Ensures compliance with local landlord-tenant laws

48

Typical cost: 8-10% of gross monthly rent for single-family rentals. Some charge a leasing fee (50-100% of one month's rent) when they place a new tenant.

How to evaluate:

- Average vacancy rate (should be under 5% in their portfolio)
- Average tenant retention rate (higher is better; means they screen well and maintain properties)
- Their process for maintenance requests (24-hour response? Emergency protocol?)
- How they handle evictions (do they have in-house legal support?)
- Technology: Do they offer an online owner portal where you can see real-time financials?
- How many units they manage (too few = not experienced; too many = you're a number, not a client)
- References from current landlords in their portfolio

Monthly Cash Flow Projections by Investment Level

This is what passive real estate cash flow looks like at different capital levels, using conservative underwriting (6-8% cash-on-cash return on turnkey properties):

49

THE MATH: Passive Income by Capital Deployed

CAPITAL DEPLOYED	PROPERTIES (AT $50K-$75K PER)	MONTHLY CASH FLOW (CONSERVATIVE)	MONTHLY CASH FLOW (MODERATE)	ANNUAL CASH FLOW
$100,000	1-2 properties	$500-$700	$700-$900	$6,000-$10,800
$250,000	3-5 properties	$1,250-$1,750	$1,750-$2,500	$15,000-$30,000
$500,000	6-10 properties	$2,500-$3,500	$3,500-$5,000	$30,000-$60,000
$1,000,000	12-20 properties	$5,000-$7,000	$7,000-$10,000	$60,000-$120,000

Conservative = 6% cash-on-cash (accounting for vacancy, maintenance, management)
Moderate = 8-10% cash-on-cash (strong markets with experienced management)
At $500,000 deployed, your passive real estate income ($30,000-$60,000/year) approaches or exceeds what a typical financial advisor would generate in portfolio growth after fees on the same capital. And your real estate income is monthly, predictable, and growing with rent increases -- while your advisor's "growth" is subject to market crashes, fee drag, and phantom taxation.
At $1,000,000 deployed, you're generating $60,000-$120,000/year in passive cash flow. Enough to partially or fully replace most W-2 incomes. And this is before accounting for appreciation, mortgage paydown, and tax advantages.

50

CASE STUDY: Sarah, Corporate Attorney, $520K Repositioning

Sarah's Situation:

- *Age: 47*
- *Income: $285,000/year (partner at mid-size law firm)*
- *Total investable assets: $780,000 (401(k) from previous firm: $310K, current firm 401(k): $220K, brokerage account: $180K, savings: $70K)*
- *Current portfolio: Mix of target-date funds and large-cap growth mutual funds*
- *Average gross return: 7.8%*
- *Total fee drag: 2.3%*
- *Net return: 5.5%*
- *Annual fees paid: ~$15,600*
- *Annual cash flow from portfolio: $6,200 (dividends)*
- *Sarah's frustration: "I make $285K a year and I still feel like I'm on a treadmill. My portfolio goes up and down with the market and I have zero control over it."*

Sarah's Wealth Shift Plan:

- *Phase 1 (Months 1-6): Rolled $310K from old 401(k) into a Roth SDIRA (converted $62K/year over 5 years to manage tax impact). Deployed first $80K into a turnkey rental in Birmingham, AL.*
- *Phase 2 (Months 6-12): Liquidated $180K brokerage account using waterfall strategy. Deployed $140K into two additional turnkey rentals (Memphis, TN).*
- *Phase 3 (Months 12-18): Invested $100K into a multifamily syndication (200-unit apartment in Houston).*
- *Kept: $220K in current 401(k) (no in-service rollover available), $70K in savings as emergency/opportunity reserve.*
- *Total repositioned: $520K across 3 direct properties + 1 syndication*

Sarah's Results at 18 Months:

- *3 rental properties generating $1,350/month combined ($450/property avg)*

51

- *Syndication paying 7% preferred return = $583/month*
- *Total monthly passive income: $1,933*
- *Annual passive income: $23,196*
- *Portfolio appreciation: ~$35,000 (across all properties)*
- *Mortgage paydown: ~$12,000*
- *Tax impact: Depreciation from 3 properties + syndication K-1 losses sheltered $38,000 of her W-2 income, saving approximately $12,500 in federal taxes*

Net financial impact in year 1:

- *Passive income: $23,196*
- *Tax savings: $12,500*
- *Equity build (appreciation + paydown): $47,000*
- *Total economic benefit: $82,696*

Compare to leaving $520K in her managed portfolio:

- *Portfolio growth at 5.5% net: $28,600*
- *Dividends: $4,100*
- *Tax savings: $0*
- *Total economic benefit: $32,700*

The Wealth Shift generated $82,696 in total economic value vs. $32,700 from Wall Street. ***That's 2.5x the benefit.*** *In year one alone.*
Sarah's quote: "For the first time in 20 years of investing, I feel like my money is actually working for me instead of for someone else."

52

ACTION STEP: Module 4

1. *Based on your capital level, identify which strategy (or combination) matches your situation:*
    - *Under $100K: Start with one turnkey property or REIT allocation*
    - *$100K-$250K: 2-3 turnkey properties and/or one BRRRR with a team*
    - *$250K-$500K: Portfolio of turnkey properties and/or syndication investment*
    - *$500K+: Diversified portfolio of direct ownership + syndications*
2. *Research three turnkey providers in investor-friendly markets. Visit their websites, review available inventory, and request their investor packet.*
3. *Define your cash flow target: What monthly number do you need from real estate to make this repositioning worthwhile? Write it down. We'll build the math in Module 5.*

In the audio module, I walk through the due diligence process on a real turnkey provider: what I looked for, what I found, and the questions that separated the good operators from the mediocre ones.

MODULE 5: THE NUMBERS. YOUR WEALTH SHIFT CALCULATOR

The Only Module That Matters If You're Analytical

If you're the type who needs to see the spreadsheet before making a decision, this module is your foundation. Everything here is math. No opinions. No motivation. Numbers.

I'm going to walk you through six calculations that will give you a complete picture of where you are, where you should be, and exactly how to get there.

53

Calculator 1: Your Current Portfolio Analysis

Before you reposition anything, you need to know exactly what your current portfolio is doing for you -- and to you.

Pull your most recent statements for every account:

- 401(k) and/or 403(b)
- Traditional IRA
- Roth IRA
- Brokerage accounts
- Savings accounts
- CDs
- Any other investment accounts

For each account, document:

FIELD	YOUR NUMBER
Account type	_____
Current balance	$ _____
Annual contribution	$ _____
Gross return (last 3-year average)	_____ %
Total annual fees (all layers)	_____ %
Net return after fees	_____ %
Annual cash flow generated (dividends, interest)	$ _____
Tax impact (distributions, capital gains)	$ _____
Net real return (after fees, taxes, and 3-4% inflation)	_____ %

54

Total across all accounts:

FIELD	TOTAL
Total investable assets	$ _____
Total annual fees paid	$ _____
Total net real return	_____ %
Total annual cash income generated	$ _____

Most people who complete this exercise discover two things: (1) they're paying far more in fees than they thought, and (2) their portfolio generates almost no current income. It's a growth engine with a leak -- the growth is real, but the fees and inflation are quietly draining it every year.

Calculator 2: Fee Drag Calculator

This shows you the long-term cost of staying in your current fee structure.

The Formula:

Future Value Without Fees = Current Balance x (1 + Gross Return)^Years

Future Value With Fees = Current Balance x (1 + Gross Return - Total Fees)^Years

Fee Cost = Future Value Without Fees - Future Value With Fees

Run this calculation for your specific numbers:

INPUT	YOUR NUMBER
Current balance	$ _____
Gross annual return	_____ %
Total annual fee drag	_____ %
Years until retirement	_____

55

OUTPUT	10 YEARS	15 YEARS	20 YEARS
Value without fees	$ _____	$ _____	$ _____
Value with fees	$ _____	$ _____	$ _____
Total fees paid	**$ _____**	**$ _____**	**$ _____**

56

THE MATH: Fee Drag on Common Portfolio Sizes

Assuming 8% gross return and 2.5% total fee drag (5.5% net):

STARTING BALANCE	10 YEARS (NO FEES)	10 YEARS (WITH FEES)	10-YEAR FEE COST
$100,000	$215,892	$170,814	$45,078
$250,000	$539,731	$427,035	$112,696
$500,000	$1,079,462	$854,070	$225,392
$750,000	$1,619,193	$1,281,105	$338,088
$1,000,000	$2,158,925	$1,708,144	$450,781

STARTING BALANCE	20 YEARS (NO FEES)	20 YEARS (WITH FEES)	20-YEAR FEE COST
$100,000	$466,096	$291,776	$174,320
$250,000	$1,165,240	$729,440	$435,800
$500,000	$2,330,479	$1,458,880	$871,599
$750,000	$3,495,719	$2,188,320	$1,307,399
$1,000,000	$4,660,957	$2,917,757	$1,743,200

At $500K over 20 years, fees cost you $871,599. That's not a rounding error. That's a retirement.

57

Calculator 3: Opportunity Cost Calculator

This is the calculation most people never run. It shows what your money SHOULD be earning if it were deployed into passive real estate instead of sitting in a fee-heavy portfolio.

The Formula:

Opportunity Cost = (Real Estate Expected Return - Current Net Return) x Current Balance x Years

Assumptions for real estate expected return:

- Cash-on-cash: 7% (conservative)
- Appreciation: 3%
- Mortgage paydown: 2% (as percentage of your cash investment)
- Tax benefits: 1-2% (depreciation offsetting income)
- Total expected return: **13-14%** (using leverage)

Compare to your current net return (typically 4-6% after fees and real inflation in a conventional portfolio).

58

THE MATH: Opportunity Cost. What Your Money Should Be Earning

CURRENT BALANCE	*CURRENT NET RETURN (5%)*	*RE EXPECTED RETURN (13%)*	*ANNUAL OPPORTUNITY COST*	*10-YEAR OPPORTUNITY COST*
$100,000	*$5,000/yr*	*$13,000/yr*	*$8,000*	*$80,000+*
$250,000	*$12,500/yr*	*$32,500/yr*	*$20,000*	*$200,000+*
$500,000	*$25,000/yr*	*$65,000/yr*	*$40,000*	*$400,000+*
$1,000,000	*$50,000/yr*	*$130,000/yr*	*$80,000*	*$800,000+*

Note: These are simplified linear calculations. With compounding, the real estate advantage is even larger because RE returns compound through appreciation, rent increases, and mortgage paydown simultaneously.
The opportunity cost of NOT being in real estate with $500K over 10 years is approximately ***$400,000 or more.*** *That's the cost of indecision. The cost of staying comfortable in a broken system because changing feels risky.*

Calculator 4: SDIRA Conversion Timeline Planner

If you're using a Self-Directed IRA for part of your repositioning, here's the timeline framework:

59

STEP	TIMELINE	NOTES
Research SDIRA custodians	Week 1-2	Compare 2-3 custodians on fees, service, speed
Open SDIRA account	Week 2-3	Paperwork takes 3-7 business days
Initiate direct rollover	Week 3-4	Call current plan administrator, provide new custodian details
Rollover processing	Week 4-8	Typically 2-4 weeks for funds to transfer
Funds available in SDIRA	Week 6-8	Confirm receipt with custodian
Identify investment property	Week 6-12	Can begin searching before rollover is complete
Due diligence on property	Week 10-14	Inspection, appraisal, financial analysis
Direct custodian to purchase	Week 12-16	Custodian reviews and approves investment
Close on property	Week 14-20	Standard closing process, in IRA's name
First rent check deposited to IRA	**Week 16-24**	**Cash flow begins**

Total timeline from decision to first cash flow: **4-6 months**

That's faster than most people expect. Within half a year, money that was earning 4-6% in a target-date fund can be generating 7-10%+ in cash-on-cash returns from a rental property, inside your retirement account, with the same tax deferral (or tax-free in a Roth).

Calculator 5: The "Replacement Income" Formula

This is the calculation that changes lives. How many rental units do you need to replace your W-2 income?

The Formula:

Number of Units = Target Monthly Income / Average Net Cash Flow Per Unit

60

THE MATH: How Many Units to Replace Your W-2

W-2 INCOME	*MONTHLY TARGET (75%)*	*AVG CASH FLOW/UNIT ($400)*	*UNITS NEEDED*	*CAPITAL REQUIRED (AT $50K/UNIT)*
$80,000	*$5,000*	*$400*	*13 units*	*$650,000*
$120,000	*$7,500*	*$400*	*19 units*	*$950,000*
$150,000	*$9,375*	*$400*	*24 units*	*$1,200,000*
$200,000	*$12,500*	*$400*	*32 units*	*$1,600,000*
$300,000	*$18,750*	*$400*	*47 units*	*$2,350,000*

75% target because rental income is taxed more favorably than W-2 income (depreciation deductions), so you need less gross income to maintain the same lifestyle.
You don't need to get there in one move. This is a 3-5 year build. Start with 2-3 units. Reinvest cash flow. Refinance to pull capital out. Use that capital to acquire more units. The compounding effect of real estate portfolios is powerful -- each property funds the next.

At $400/month net per unit:

- *5 units = $2,000/month = $24,000/year*
- *10 units = $4,000/month = $48,000/year*
- *15 units = $6,000/month = $72,000/year*
- *20 units = $8,000/month = $96,000/year*

$96,000/year in passive rental income, much of it sheltered by depreciation, is life-changing for anyone at any income level.

61

Calculator 6: Risk Tolerance Assessment

Not all passive real estate strategies carry the same risk. Use this framework to match your risk tolerance to the right approach:

Conservative (Capital Preservation Priority)

- Strategy: Turnkey properties in stable markets with long-term tenants
- Expected cash-on-cash: 5-7%
- Capital allocation: Start with 20-30% of investable assets in RE
- Market selection: Low-volatility metros with steady population and job growth
- Best for: Investors within 10 years of retirement, or those who can't afford significant capital loss

Moderate (Balanced Growth and Income)

- Strategy: Mix of turnkey properties and BRRRR (with professional management)
- Expected cash-on-cash: 7-10%
- Capital allocation: 40-60% of investable assets in RE
- Market selection: Growing metros with strong rental demand and appreciation potential
- Best for: Mid-career professionals with stable W-2 income and 15+ year horizon

Aggressive (Growth Priority)

- Strategy: BRRRR, syndications, value-add properties
- Expected cash-on-cash: 10-15%+
- Capital allocation: 60-80% of investable assets in RE
- Market selection: High-growth markets, emerging neighborhoods, value-add opportunities
- Best for: High-income earners with strong cash reserves who can absorb temporary setbacks

There's no wrong answer. The right allocation depends on your specific numbers, your timeline, and how you sleep at night. The point is to make a deliberate, data-driven choice rather than defaulting to the Wall Street playbook because it's familiar.

62

> ***ACTION STEP: Module 5***
>
> 1. *Complete Calculator 1 (Current Portfolio Analysis) with your actual numbers. Every account. Every fee. No rounding.*
> 2. *Run Calculator 2 (Fee Drag) with your specific balance and fee structure. Look at the 20-year number. Write it down somewhere you'll see it every morning.*
> 3. *Calculate your Replacement Income number (Calculator 5). How many units do you need? What capital does that require? How does that compare to what you currently have in retirement accounts and brokerage portfolios?*
> 4. *Identify your risk tolerance category and the corresponding strategy mix.*
>
> *In the audio module, I walk through all six calculators with real numbers from two client scenarios: a $280K repositioning and a $650K repositioning. You'll hear exactly how the math informed each decision and the results 18 months later.*

MODULE 6: BUILDING YOUR PASSIVE INVESTMENT TEAM

Why Your Team Is Different from an Active Investor's Team

An active investor -- someone doing their own deals, wholesaling, flipping, managing rehabs -- needs a team built for speed and execution. They need a contractor who can start tomorrow. They need a title company that can close in 10 days. They need a skip tracer and a direct mail company and a closing attorney who works weekends.

You don't need any of that.

Your team is built for a different purpose: managing and protecting wealth in real estate without requiring your daily attention. Every person on your team exists so you don't have to.

63

Here are the six team members every passive investor needs, how to find them, and how to make sure they're good.

Team Member 1: SDIRA Custodian

Role: Holds and administers your Self-Directed IRA. Processes investment transactions on your direction. Handles IRS reporting and compliance.

Why they matter: Your custodian is the gatekeeper to your retirement funds. If they're slow, you lose deals. If they don't understand real estate transactions, they create problems at closing. If their fee structure is predatory, they eat into your returns.

How to select:

- Compare 2-3 custodians (see Module 2 recommendations)
- Ask about average processing time for real estate purchases (should be under 2 weeks)
- Confirm they have experience with the type of investment you're pursuing
- Review fee schedules in detail: annual account fees, transaction fees, wire fees, and asset-based fees
- Call their customer service number and see how long it takes to reach a human

Red flags:

- Processing times over 3 weeks
- Unclear or changing fee structures
- Customer service that routes you through automated menus
- They try to steer you toward specific investments (custodians should be neutral)

Team Member 2: Tax Strategist (CPA)

Role: Not just someone who files your taxes -- a strategic advisor who understands the intersection of W-2 income, real estate investing, SDIRA taxation, depreciation strategies, 1031 exchanges, and entity structuring.

64

Why they matter: The tax advantages of real estate are enormous -- but only if you capture them correctly. Depreciation, cost segregation, Section 199A deductions, 1031 exchanges, UBIT management in SDIRAs. These strategies can save you $10,000-$50,000+ per year in taxes. A CPA who doesn't understand real estate will miss them all.

How to find one:

- Ask other real estate investors in your target market for referrals
- Search the National Association of Tax Professionals or American Institute of CPAs for specialists in real estate
- Look for CPAs who also invest in real estate themselves (they understand the strategies firsthand)
- BiggerPockets forums and local real estate investor meetups are good referral sources

Questions to ask:

1. How many real estate investors do you work with?
2. Do you invest in real estate personally?
3. Are you familiar with SDIRA taxation and UBIT/UDFI?
4. Have you handled a 1031 exchange in the last year?
5. Do you do tax planning (proactive) or only tax preparation (reactive)?
6. Are you familiar with cost segregation studies? When do you recommend them?

What to expect to pay: $2,000-$5,000+ per year for a CPA who handles both your personal taxes and real estate portfolio tax strategy. This is not a $200 TurboTax situation. The right CPA saves you multiples of their fee.

Red flags:

- They've never done a real estate investor tax return
- They're unfamiliar with SDIRA rules or 1031 exchanges
- They only do tax preparation (filing), not tax planning (strategy)
- They discourage real estate investing because it's "complicated"

65

Team Member 3: Real Estate Attorney

Role: Reviews contracts, handles entity structuring (LLCs), advises on liability protection, and assists with any legal issues related to your properties.

Why they matter: When you own rental property, you need legal protection. An LLC properly structured provides asset protection. Purchase contracts need review. Lease agreements need to comply with local law. If a tenant sues, you need an attorney who already knows your portfolio.

How to find one:

- Ask your CPA or property manager for referrals (they work with RE attorneys regularly)
- Look for attorneys who specialize in real estate investor representation, not general real estate law (buying/selling houses for homeowners is different from structuring an investment portfolio)
- State bar association directories can filter by specialty

Questions to ask:

1. How many real estate investors do you represent?
2. Do you handle LLC formation and entity structuring?
3. Are you familiar with SDIRA property ownership structures?
4. What's your typical fee for an LLC formation? For a contract review?
5. Do you work with investors in the state where I'm buying property? (Real estate law is state-specific)

What to expect to pay: $500-$1,500 for an LLC formation. $300-$800 for a contract review. $200-$500/hour for general advisory. Having an attorney on retainer for annual review is also smart, roughly $1,000-$2,000/year for periodic consultations.

Team Member 4: Property Manager

Role: Manages every aspect of your rental property operations: tenant placement, rent collection, maintenance coordination, financial reporting, legal compliance.

66

Why they matter: Your property manager is the single most important hire for a passive investor. A great manager makes your investment truly hands-off and profitable. A bad manager will drain your returns through high vacancy, deferred maintenance, poor tenant screening, and incompetent financial reporting.

I covered evaluation criteria in Module 4. The interview framework:

Questions to ask every property manager:

1. How many units do you currently manage?
2. What is your average vacancy rate across your portfolio?
3. What is your average tenant retention rate?
4. Walk me through your tenant screening process. What criteria do you use?
5. How do you handle maintenance requests? What's your response time guarantee?
6. How do you handle evictions? Do you have in-house legal support?
7. What does your monthly owner report include? Can I see a sample?
8. Do you have an online owner portal? Can I see it?
9. What are your fees? (Management fee, leasing fee, renewal fee, maintenance markup?)
10. Can I speak with three current property owners in your portfolio?

Fee structure to expect:

- Management fee: 8-10% of gross monthly rent
- Leasing fee: 50-100% of first month's rent (for tenant placement)
- Renewal fee: $150-$300 (for renewing an existing lease)
- Maintenance markup: 0-15% on top of contractor costs (some managers mark up, some don't)

The math on property management fees:

On a $1,500/month rental, 10% management = $150/month = $1,800/year. That's the cost of not dealing with tenants, toilets, and 2 AM calls. If you earn $100K+ per year, your time is worth $50-$100+/hour. Managing a rental property yourself takes 5-10 hours per month -- that's $250-$1,000/month of your time. The $150/month property management fee is a bargain.

67

Team Member 5: Turnkey Provider or Investor-Friendly Agent

Role: Sources and presents investment properties that meet your criteria. In the case of a turnkey provider, they also handle renovation and property management placement.

Why they matter: The quality of your deal pipeline determines the quality of your portfolio. A great turnkey provider or investor-friendly agent brings you properties that are already vetted, analyzed, and ready to perform. They save you hundreds of hours of searching, analyzing, and negotiating.

Turnkey provider evaluation: See Module 4 for detailed criteria.

Investor-friendly agent evaluation:

- They understand investment metrics (cap rate, cash-on-cash, GRM, etc.)
- They've worked with investors before (ask for references)
- They can identify properties that meet investment criteria, not just properties that look nice
- They understand the local rental market (average rents, vacancy rates, tenant demographics)
- They're responsive and professional (if they take 3 days to return a call, move on)

How to find one:

- BiggerPockets agent finder
- Local real estate investor association meetings
- Referrals from your property manager (they know which agents bring good deals)
- Ask turnkey providers if they also sell non-turnkey properties for investors who want to BRRRR

Team Member 6: Insurance Specialist

Role: Provides landlord insurance (not homeowner's insurance; they're different), umbrella policies, and advises on risk coverage for your real estate portfolio.

Why they matter: A standard homeowner's insurance policy does not cover rental properties. You need a landlord policy that covers the structure, loss of rental income during repairs, and li-

68

ability from tenant or visitor injuries. As your portfolio grows, an umbrella policy adds an additional layer of protection.

What you need:

- Landlord insurance on each property (covers structure, loss of rents, liability)
- Umbrella policy ($1M-$5M in additional liability coverage, typically $200-$500/year per $1M)
- Proper coverage amounts (replacement cost, not market value)

How to find one:

- Look for insurance agents who specialize in rental property and investor portfolios
- National carriers with strong landlord programs: State Farm, Allstate, Farmers, USAA (military), and specialty providers like NREIG (National Real Estate Insurance Group)
- Ask for a portfolio discount if you have multiple properties with the same carrier

Questions to ask:

1. Do you specialize in landlord and rental property insurance?
2. What does your policy cover in terms of loss of rental income?
3. What liability coverage do you recommend for my portfolio size?
4. Can you bundle multiple properties for a discount?
5. What umbrella policy options do you offer?

How to Vet Every Team Member

Regardless of which team member you're evaluating, these principles apply universally:

1. Referral first, search second. The best team members come from referrals by other investors. If three experienced investors in your target market all use the same property manager, that's a signal.

2. Track record over promises. Anyone can sound good on the phone. Ask for verifiable results: vacancy rates, client retention rates, references you can actually call.

69

3. Alignment of incentives. Does this person make money when you make money? Or do they make money regardless? Property managers who also own rentals tend to manage better because they understand the owner's perspective. CPAs who invest in real estate tend to be more aggressive on legitimate tax strategies.

4. Communication style. You're not looking for someone who tells you what you want to hear. You want someone who tells you the truth -- quickly, clearly, and without sugar-coating. If they can't return a call within 24 hours during the courting phase, they won't return calls faster once they have your money.

5. Replace early, not late. If a team member isn't performing, replace them. The cost of staying with a bad property manager or an incompetent CPA far exceeds the inconvenience of switching. This is your wealth. Protect it.

ACTION STEP: Module 6

1. *Identify which team members you already have and which you need to find. Most people need: SDIRA custodian, CPA, property manager, and turnkey provider or agent. Attorney and insurance specialist can come slightly later.*
2. *Start with the SDIRA custodian (if you're using retirement funds) and the CPA. These are the two positions that take the longest to vet and have the most impact on your first 90 days.*
3. *For property management, identify two or three managers in your target market and set up phone interviews. Use the 10-question framework above.*
4. *Join one online real estate investor community (BiggerPockets is the largest) and start asking for team referrals in your target market. Lurking is fine. Asking questions is better.*

In the audio module, I share the exact process I used to build teams in three different markets -- including the mistakes I made early on and how much those mistakes cost before I learned to vet properly.

70

MODULE 7: YOUR 6-MONTH WEALTH SHIFT PLAN

The Roadmap from Decision to Cash Flow

Everything in this guide has built to this module. You understand the problem (Module 1). You know the vehicle (Module 2). You have a liquidation strategy (Module 3). You know the investment strategies (Module 4). You've run the numbers (Module 5). You know who you need on your team (Module 6).

Now we execute.

Your month-by-month plan for repositioning your first tranche of capital from Wall Street to Main Street.

Month 1: Audit Your Current Portfolio

Week 1:

- Complete Calculator 1 from Module 5 (Current Portfolio Analysis) for every account you own
- Document every fee layer in every account
- Calculate your total annual fee drag and your net real return after fees, taxes, and inflation
- Calculate your total annual cash income from your portfolio (dividends, interest)

Week 2:

- Complete Calculator 2 (Fee Drag Calculator). See what fees will cost you over 10 and 20 years.
- Complete Calculator 3 (Opportunity Cost Calculator). See what your money should be earning.
- Complete Calculator 5 (Replacement Income Formula). Calculate how many units you need.
- Complete Calculator 6 (Risk Tolerance Assessment). Identify your strategy category.

Week 3:

71

- Determine how much capital you want to reposition in this first phase. Recommended starting point: 20-30% of total investable assets, or one property's worth of capital ($50,000-$100,000).
- Identify the source: SDIRA rollover, stock liquidation, savings deployment, or a combination
- If using SDIRA: Determine rollover eligibility (in-service rollover availability, old 401(k)s from previous employers)

Week 4:

- Consult with a CPA who understands real estate and SDIRAs. This is not optional. Before you move any money, have a tax professional review your plan and identify the most tax-efficient path.
- If liquidating stocks: Sort positions into the three waterfall buckets (Liquidate Now, 6-12 Months, Hold)
- Decision point: Confirm the amount, the source, and the timeline. Write it down. This is your Wealth Shift Phase 1 target.

Month 1 Deliverable: A complete financial picture of where you are, a clear decision on how much to reposition, and a CPA-reviewed plan for the most tax-efficient execution.

Month 2: Select SDIRA Custodian, Begin Rollover Paperwork

Week 5:

- If using SDIRA: Compare 2-3 custodians. Call each one. Ask about real estate transaction processing times, fees, and customer service. Select one.
- If liquidating stocks: Begin executing Bucket 1 liquidations (positions with losses for tax-loss harvesting, positions with minimal gains, high-fee positions)
- Begin researching target markets for investment (I recommend starting with 2-3 markets)

Week 6:

- Open your SDIRA account. Submit paperwork, select account type (Traditional or Roth), designate beneficiaries.

72

- Initiate the direct rollover from your 401(k) or IRA to your new SDIRA custodian. Call your current plan administrator and provide the receiving custodian's information.

Week 7-8:

- Rollover processing period. Funds typically take 2-4 weeks to transfer.
- Use this time productively: begin identifying target markets and evaluating turnkey providers or investor-friendly agents.
- Research property managers in your target markets. Set up phone interviews.

Month 2 Deliverable: SDIRA account open, rollover initiated, initial stock liquidations executed, and target market research underway.

Month 3: Identify Target Markets and Property Types

Week 9-10:

- Select 1-2 primary target markets. What to look for:
  - Population growth (growing = increasing rental demand)
  - Job growth and diversified employment base
  - Landlord-friendly laws (some states heavily favor tenants; others are balanced)
  - Median home price below $250,000 (for strong cash-on-cash returns)
  - Average rent-to-price ratio of 0.7-1.0%+ (monthly rent / purchase price)
  - Strong property management options in the area

Top markets for passive investors (as of this writing):

- Birmingham, Alabama
- Memphis, Tennessee
- Indianapolis, Indiana
- Kansas City, Missouri
- Cleveland, Ohio
- Jacksonville, Florida

73

- Little Rock, Arkansas
- Huntsville, Alabama

These markets share common traits: affordable purchase prices ($120K-$250K), strong rental demand, reasonable property taxes, landlord-friendly laws, and established turnkey provider networks.

Why you should NOT invest where you live (usually):

This is counterintuitive for most new investors, but the best market for your portfolio is almost never the city where you live -- especially if you live in a high-cost metro (New York, San Francisco, Los Angeles, Seattle, Boston, etc.). A $500,000 condo in Brooklyn that rents for $2,200/month is a terrible investment on a cash-flow basis. A $180,000 house in Memphis that rents for $1,400/month is dramatically better.

The rent-to-price ratio tells the story:

- Brooklyn condo: $2,200 / $500,000 = 0.44% (terrible)
- Memphis house: $1,400 / $180,000 = 0.78% (strong)

Passive investors buy for cash flow, not proximity. You will never visit the property. Your property manager handles everything. The tenants don't know or care where you live. Buy where the numbers work, not where you can drive by on a Sunday.

Markets to avoid for passive cash-flow investing:

- Any market where median home price exceeds $400,000 (cash flow is nearly impossible)
- Markets with rent control or rent stabilization laws (limits your upside)
- Markets with extremely tenant-friendly eviction laws (New York, San Francisco, parts of New Jersey)
- Markets overly dependent on a single employer or industry
- Markets with declining population trends

Week 11-12:

74

- Contact 2-3 turnkey providers in your target markets. Request their investor packets and available inventory.
- Interview property managers. Use the 10-question framework from Module 6.
- Confirm SDIRA funds have arrived. Verify balance with your custodian.
- If liquidating stocks: Continue Bucket 1 execution and prepare Bucket 2 positions for future liquidation.

Month 3 Deliverable: Target markets selected, turnkey providers or agents engaged, property manager candidates interviewed, SDIRA funded and ready for deployment.

Month 4: Build Your Team, Evaluate First Deals

Week 13-14:

- Finalize your property manager selection in your primary market
- Begin evaluating specific properties. For each property, run a full deal analysis:
  - Purchase price
  - Estimated rent (verified with property manager and comparable rentals)
  - All expenses: mortgage payment (P&I), property taxes, insurance, management fee, vacancy allowance, maintenance reserve, capital expenditure reserve
  - Net monthly cash flow
  - Cash-on-cash return
  - Cap rate
  - 5-year and 10-year projections (including rent increases and appreciation)

Week 15-16:

- Narrow to 2-3 finalist properties
- Order inspections on your top choice(s)
- Engage your real estate attorney for contract review
- Confirm financing: If buying with SDIRA and using a non-recourse loan, begin the loan process early (these take longer than conventional mortgages)

75

- If buying with personal funds and conventional financing, get pre-approved with a lender who works with investors

Month 4 Deliverable: Team in place, 2-3 deals analyzed in detail, top property under contract or close to it.

Month 5: Close Your First Passive Investment

Week 17-18:

- Finalize due diligence on your selected property
- Review inspection report -- negotiate repairs if needed
- Finalize financing and prepare for closing
- If SDIRA purchase: Direct your custodian to proceed with the investment. Provide all documents (contract, title commitment, closing disclosure). The custodian will sign closing documents on behalf of your IRA.
- Coordinate with your insurance specialist to have landlord insurance in place before closing

Week 19-20:

- Close on your first investment property. The property is now in your name (or your IRA's name). You are a real estate investor.
- Confirm property manager has the property set up in their system
- If tenant is already in place (turnkey): Verify rent collection process. Confirm first month's rent collection date.
- If tenant is needed: Property manager begins marketing and tenant screening. Typical time to place a tenant: 2-4 weeks in strong markets.
- Set up your tracking system: monthly financial reports from the property manager, quarterly portfolio reviews, annual CPA review

Month 5 Deliverable: Property closed. Tenant in place or being placed. Cash flow beginning or imminent.

76

Month 6: Optimize, Monitor, Prepare for Deal #2

Week 21-22:

- Review your first full month's financial report from the property manager
- Verify: rent collected, expenses paid, net cash flow deposited to your account (or SDIRA)
- Compare actual performance to your projections. Identify any variances.
- Update your net worth statement to include the new property

Week 23-24:

- Evaluate your experience. What went well? What would you do differently?
- Begin preparing for your second investment. Review your waterfall strategy -- is it time for the next tranche of liquidations?
- Identify the next property. If your first investment is performing, consider:
  - Another property in the same market (scale with the same team)
  - A property in a second market (diversification)
  - A syndication investment (different strategy, same passive approach)
- Review your Replacement Income target. How far did this first property get you?

Month 6 Deliverable: First property performing. Financial reporting established. Next investment identified. Wealth Shift in motion.

The Compounding Effect: Year 1 vs. Year 3 vs. Year 5

The Wealth Shift isn't a one-time event. It's a compounding process. Each property generates cash flow that funds the next acquisition. Each year of appreciation builds equity that can be accessed through refinancing. Each lease renewal brings a rent increase that improves your cash flow. The portfolio builds on itself.

77

THE MATH: The Compounding Portfolio

Starting Position: $300,000 in investable capital. Deploying via the Wealth Shift strategy.

Year 1:

- *Properties acquired: 3 (at $200K each, $60K down per)*
- *Capital deployed: $180,000*
- *Capital reserved: $120,000*
- *Monthly cash flow: $1,200 ($400/unit)*
- *Annual cash flow: $14,400*
- *Portfolio value: $600,000*
- *Total equity: $180,000 (down payments)*

Year 3:

- *Properties acquired: 5 total (added 2 more from remaining reserves + cash flow reinvestment)*
- *Monthly cash flow: $2,400 ($480/unit avg with rent increases)*
- *Annual cash flow: $28,800*
- *Portfolio value: $700,000+ (appreciation)*
- *Total equity: $280,000+ (down payments + appreciation + paydown)*
- *Cash flow reinvested: ~$50,000 (from years 1-3)*

Year 5:

- *Properties acquired: 8 total (added 3 more through refinancing equity + cash flow)*
- *Monthly cash flow: $4,480 ($560/unit avg with rent increases)*
- *Annual cash flow: $53,760*
- *Portfolio value: $1,200,000+*
- *Total equity: $520,000+*
- *Your original $300K is now generating $53,760/year in passive cash flow AND you've built $520K+ in equity*

78

> *For comparison: That same $300K left in a managed portfolio at 5% net would be worth approximately $383,000 after 5 years, generating $0 in monthly cash flow.*
> ***The Wealth Shift portfolio: $520K equity + $53K annual cash flow. The Wall Street portfolio: $383K balance + $0 cash flow.***
> *By year 5, the gap is over $190,000 in equity AND $53,760 per year in income. And that gap accelerates every year.*

The Year 10 Snapshot

Let me paint the picture of where this leads if you execute the plan and stay disciplined.

Year 10, starting from $300K repositioned:

- Properties owned: 12-15 (through capital recycling, cash flow reinvestment, and refinancing)
- Total portfolio value: $2,200,000-$2,800,000
- Total equity: $1,100,000-$1,400,000
- Monthly cash flow: $8,000-$12,000
- Annual passive income: $96,000-$144,000
- Total fees paid to Wall Street: $0

At $96,000-$144,000 per year in passive income -- income that arrives whether you go to work or not -- you have options. Real options. You can keep your W-2 because you enjoy the work, knowing the financial pressure is gone. You can negotiate differently because you're not dependent on the paycheck. You can retire early. You can travel. You can focus on what matters.

That's what the Wealth Shift creates. Not a retirement plan that might work if the market cooperates and you don't die too early or live too long. A cash flow engine that pays you every month, grows every year, and builds equity that compounds for decades.

And it all starts with a single decision to move the first tranche of capital from Wall Street to Main Street.

79

Bridge to Coaching

This guide gave you the what and the why. The strategy is clear. The math is undeniable. The 6-month plan is laid out step by step.

But what I've learned from 15 years and $250 million in real estate: **the gap between knowing the strategy and executing it is where most high-earners get stuck.**

Not because they're not smart. Because they're smart enough to know that one wrong move with $200,000, $400,000, or $800,000 could be catastrophic. They know the stakes. And the stakes create paralysis.

I've seen it happen dozens of times. Someone reads a guide like this. They understand the math. They agree with the strategy. They even identify their first target market and custodian. And then... nothing. Three months go by. Six months. A year. They're still in the same 401(k), still paying the same fees, still checking the same quarterly statements. Not because they didn't believe in the plan. Because nobody was there to tell them: "Yes. This specific deal. This specific number. Pull the trigger."

The people who successfully execute this repositioning -- the ones who go from "I understand the Wealth Shift" to "I have eight properties generating $5,000 a month" -- all had one thing in common.

They had someone who'd done it before, sitting next to them, reviewing their specific numbers, evaluating their specific deals, and saying "go" or "don't go" in real time.

Not a YouTube video. Not a course. A person with $250 million in transaction experience looking at their situation and giving them a direct, personalized answer.

In the coaching program, that's exactly what happens. I personally review every deal before you invest a dollar. Every set of numbers. Every contract. Every market. Every property manager.

What that looks like:

- **Portfolio audit:** I review your complete financial picture -- retirement accounts, brokerage accounts, savings, debt, income, expenses -- and build a repositioning plan specific to your numbers and your timeline

80

- **Deal review:** Before you invest a dollar, I run every deal through the same analysis framework I use for my own investments. You get a clear "proceed" or "pass" -- and the specific reasons why
- **Team vetting:** I help you evaluate custodians, property managers, turnkey providers, and CPAs. I know who's good in which markets because I've operated in those markets
- **Tax strategy coordination:** I work with your CPA to ensure your repositioning is tax-optimized -- Roth conversions, depreciation scheduling, 1031 planning, cost segregation timing
- **Accountability:** We meet regularly. You have assignments. You have deadlines. The 6-month plan in Module 7 becomes a living document with someone holding you to it

For someone repositioning $200K-$500K -- or more -- that level of guidance isn't a luxury. It's a necessity. The cost of one bad deal at this capital level far exceeds the cost of having an expert in your ear.

Details are coming to your inbox.

> ***ACTION STEP: Module 7***
>
> 1. *Print or save this 6-month plan. Put Month 1 tasks on your calendar this week.*
> 2. *Schedule your CPA consultation (this week if possible). The tax strategy conversation needs to happen before any money moves.*
> 3. *If you're using SDIRA: Contact your top custodian choice today. Opening the account is the first domino.*
> 4. *If you're liquidating stocks: Sort your positions into the three waterfall buckets today. Knowledge without action is entertainment.*
> 5. *Set a calendar reminder for 6 months from today. Label it: "Review first Wealth Shift property performance." That's your accountability checkpoint.*
>
> *In the audio module, I close with a personal message about what this shift meant for the investors I've worked with -- and what it can mean for you.*

81

CONCLUSION: THE ROADMAP IS YOURS. THE GUIDE IS AVAILABLE

You now have what 99% of high-earning professionals don't: a clear, data-driven roadmap for repositioning your wealth from underperforming Wall Street accounts into cash-flowing real estate on Main Street.

You understand the Wall Street Tax and exactly how much it's costing you every year. You know how a Self-Directed IRA works and how to roll your 401(k) into one. You have a tax-efficient liquidation strategy. You know which passive real estate strategies match your capital and timeline. You've run the numbers -- the real numbers, not projections from a fund prospectus. You know who to hire and how to vet them. And you have a 6-month plan to execute.

This is the information that financial advisors don't share because it moves your money out of their ecosystem. This is the playbook that most real estate educators package into a $50,000-$100,000 coaching program and sell to people who don't have the capital to execute it. You have the capital. You have the knowledge. And you have a plan.

What Separates People Who Execute from People Who Don't

I've been doing this long enough to see patterns. The people who successfully complete the Wealth Shift share three characteristics:

1. They made a decision and set a date. Not "I'll look into it someday." Not "Maybe when the market cools down." They said: "I'm moving $X by [specific date]." A decision without a deadline is a wish. A decision with a deadline is a plan.

2. They accepted imperfection. Your first property won't be perfect. The numbers won't be exactly what the spreadsheet projected. The property manager will make a mistake. A maintenance issue will cost more than expected. None of that matters. What matters is that you're now on the right side of the equation -- owning assets instead of funding someone else's fee structure. Imperfect action beats perfect analysis every time.

82

3. They had support. Whether it was a mentor, a coaching program, a mastermind group, or an experienced friend -- the people who execute have someone they can call when they hit a decision point. Real estate is not complicated, but the first time you do anything, having someone who's done it before changes everything. It turns a 6-month deliberation into a 30-minute phone call.

If you see yourself in those three characteristics -- if you're the type who makes decisions, takes imperfect action, and values expert guidance -- you're exactly who this guide was written for. And you're exactly who the coaching program was built for.

The One Thing This Guide Can't Give You

There's one element missing from this guide -- and it's missing on purpose.

This guide can tell you *what* to do and *why* to do it. It can give you frameworks, calculators, and strategies that apply to a wide range of situations. What it cannot do is tell you *exactly which property to buy with your specific $247,000*. It can't tell you whether your specific 401(k) plan allows in-service rollovers. It can't tell you whether your specific tax situation favors a Roth conversion in 2026 or 2027. It can't tell you whether the specific turnkey provider you're evaluating is trustworthy.

Those are individual decisions that require individual analysis. And the cost of getting them wrong -- at this capital level -- is significant.

That's why the coaching program exists. Not as a sales pitch. As a risk management tool.

When you're repositioning $200K, $400K, $800K from one asset class to another, the single most valuable thing you can have is someone who's done it hundreds of times, looking at your specific numbers, and giving you a direct answer: *this deal is good* or *walk away from this one*.

In the coaching program, I review every deal. Every number. Every contract. Before you invest a dollar.

For someone at your level, that's not an expense. It's insurance.

83

The details are on their way to your inbox. If you're ready to execute this plan with an expert in your ear, that's your next step.

If not -- if you're the type who reads, plans, and executes independently -- everything you need is in these pages. The calculators work. The strategies are proven. The math doesn't lie.

Either way, the Wealth Shift is happening. The only question is whether your money is on the right side of it.

END OF GUIDE

ABOUT THE AUTHOR

J. Marque has closed over $250 million in real estate transactions -- as a wholesaler, flipper, landlord, title company owner, and consultant. He's touched almost every side of the business except holding a real estate license or originating mortgages. He also operates a private real estate investment firm focused on acquiring and repositioning residential assets across the Southeast.

Before any of that, he served in the United States Marine Corps. He doesn't lead with it, but it shaped everything -- the discipline, the directness, and the refusal to sugarcoat the truth.

The Money Decoded trilogy was J. Marque's answer to a broken system: three books designed to teach people what 12 years of school and 4 years of college never did. *The Wealth Shift* is the next step -- a repositioning guide for the people who read the trilogy, understood the problem, and demanded a solution.

If you want to go further -- to have someone who's done $250 million in real estate reviewing your specific deals, your specific accounts, and your specific plan before you deploy a dollar -- the coaching program is available. Details at the link in your inbox.

84

The rules changed. Your money shouldn't be playing by the old ones.
